

Programming Languages and Translators

Ronghui Gu

Spring 2019

Columbia University

Prof. [Ronghui Gu](#)

515 Computer Science Building

ronghui.gu@columbia.edu

Office hours: Thursdays 1:30 - 2:30 PM / by appointment

Prof. Stephen A. Edwards and Prof. Baishakhi Rey also teach 4115.

*These slides are borrowed from Prof. Edwards.

What is a Programming Language?

A programming language is a notation that a person and a computer can both understand.

- It allows you to express what is the **task** to compute
- It allows a computer to **execute** the computation task

Every programming language has a **syntax** and **semantics**.

- Syntax: how characters combine to form a program
- Semantics: what the program *means*

Components of a language: Syntax

How characters combine to form a program.

Calculate the n -th Fibonacci number.

is syntactically correct English, but isn't a Java program.

```
class Foo {  
    public int j;  
    public int foo(int k) { return j + k; }  
}
```

is syntactically correct Java, but isn't C.

Specifying Syntax

Usually done with a **context-free grammar**.

Typical syntax for algebraic expressions:

$$\begin{array}{lcl} \text{expr} & \rightarrow & \text{expr} + \text{expr} \\ & | & \text{expr} - \text{expr} \\ & | & \text{expr} * \text{expr} \\ & | & \text{expr} / \text{expr} \\ & | & (\text{expr}) \\ & | & \mathbf{digits} \end{array}$$

Components of a language: Semantics

What a well-formed program “means.”

The semantics of C says this computes the n th Fibonacci number.

```
int fib(int n)
{
    int a = 0, b = 1;
    int i;
    for (i = 1 ; i < n ; i++) {
        int c = a + b;
        a = b;
        b = c;
    }
    return b;
}
```

Something may be syntactically correct but semantically nonsensical

The rock jumped through the hairy planet.

Or ambiguous

The chickens are ready to eat.

Nonsensical in Java:

```
class Foo {  
    int bar(int x) { return Foo; }  
}
```

Ambiguous in Java:

```
class Bar {  
    public float foo() { return 0; }  
    public int foo() { return 0; }  
}
```

What is a Translator?

A programming language is a notation that a person and a computer can both understand.

- It allows you to express what is the **task** to compute
- It allows a computer to **execute** the computation task

A translator translates what you express to what a computer can execute.

What is a Translator?

C

```
int gcd(int a, int b)
{
    while (a != b) {
        if (a > b)
            a -= b;
        else b -= a;
    }
    return a;
}
```

Assembly

```
gcd: pushl %ebp
     movl %esp, %ebp
     movl 8(%ebp), %eax
     movl 12(%ebp), %edx
     cmpl %edx, %eax
     je   .L9
.L7: cmpl %edx, %eax
     jle .L5
     subl %edx, %eax
.L2: cmpl %edx, %eax
     jne .L7
.L9: leave
     ret
.L5: subl %eax, %edx
     jmp  .L2
```

Bytes

```

26 Lectures: Mondays and Wednesdays, 2:40 – 3:55 PM

Jan 23 – May 6

833 Seeley W. Mudd Building

Team project (presentation & report) May 15*

Midterm Exam Mar 13

Final Exam May 6

3 Assignments

* You can present before May 15. All team members must present.

Assignments and Grading

- 40% Team Programming Project
- 20% Midterm Exam
- 20% Final Exam (cumulative)
- 20% Three individual homework assignments

Team project is most important, but most students do well on it. Grades for tests often vary more.

Recommended Text

Alfred V. Aho, Monica S. Lam,
Ravi Sethi, and Jeffrey D. Ullman.

*Compilers: Principles, Techniques,
and Tools.*

Addison-Wesley, 2006.
Second Edition.

COMS W3157 Advanced Programming

- How to work on a large software system in a team
- Makefiles, version control, test suites
- Testing will be as important as coding

COMS W3261 Computer Science Theory

- Regular languages and expressions
- Context-free grammars
- Finite automata (NFAs and DFAs)

Collaboration

Read the CS Department's Academic Honesty Policy:

<https://www.cs.columbia.edu/education/honesty/>

Collaborate with your team on the project.

Do your homework by yourself.

- **OK**: Discussing lecture content, OCaml features
- **Not OK**: Solving a homework problem with classmates
- **Not OK**: Posting any homework questions or solutions

Don't be a cheater (e.g., copy from each other)

The Team Project

The Team Project

Design and implement your own little language.

Six deliverables:

1. A proposal describing your language (due Feb 11)
2. A language reference manual (due Feb 27)
3. A milestone: compiling “Hello World” (due Apr 1)
4. A compiler for it, written in OCaml; generating LLVM
5. A final project report (due May 15)
6. A final project presentation (due May 15)

Teams

Immediately start forming four-person teams

Each team will develop its own language

Each team member should participate in design, coding, testing, and documentation

| Role | Responsibilities |
|------------------|---|
| Manager | Timely completion of deliverables |
| Language Guru | Language design |
| System Architect | Compiler architecture, development environment |
| Tester | Test plan, test suites |

START EARLY!

How Do You Work In a Team?

- Address problems sooner rather than later
If you think your teammate's a flake, you're right
- Complain to me or your TA as early as possible
Alerting me a day before the project is due isn't helpful
- Not every member of a team will get the same grade
Remind your slacking teammates of this early and often

First Three Tasks

1. Decide who you will work with
You'll be stuck with them for the term; choose wisely
2. Assign a role to each member
3. Select a weekly meeting time
Harder than you might think

Project Proposal

- Describe the language that you plan to implement.
- Explain what sorts of programs are meant to be written in your language
- Explain the parts of your language and what they do
- Include the source code for an interesting program in your language
- 2–4 pages

Language Reference Manual

- A careful definition of the syntax and semantics of your language.
- Follow the style of the C language reference manual (Appendix A of Kernighan and Ritchie, *The C Programming Language*; see the class website).

Final Report Sections

| Section | Author |
|-------------------------|------------------|
| Introduction | Team |
| Tutorial | Team |
| Reference Manual | Team |
| Project Plan | Manager |
| Language Evolution | Language Guru |
| Translator Architecture | System Architect |
| Test plan and scripts | Tester |
| Conclusions | Team |
| Full Code Listing | Team |

Project Due Dates

| | |
|--------------------------------------|-------------|
| Proposal | Feb 11 soon |
| Language Reference Manual and Parser | Feb 27 |
| Hello World Demo | Apr 1 |
| Final Report and Presentation | May 15 |

Design a language?

A domain-specific language: awk or PHP, not Java or C++.

Examples from earlier terms:

- Matlab-like array manipulation language
- Geometric figure drawing language
- Music manipulation language
- Mathematical function manipulator
- Simple scripting language (à la Tcl)

Three Common Mistakes to Avoid

Configuration File Syndrome

- Your language should have more than just nouns
- Must be able to express *algorithms*, not just data

Standard Library Syndrome

- Good languages enable you to *build* abstractions, not just *provide* them
- Write your standard library in your language
- Aim for Legos, not Microsoft Word

C-to-C Translator Syndrome

- Your compiler's output should not look like its input

What I'm Looking For

Your language must be able to express different algorithms

- Avoid Configuration File Syndrome. Most languages should be able to express, e.g., the GCD algorithm.

Your language should consist of pieces that can mix freely

- Avoid Standard Library Syndrome. For anything you provide in the language, ask yourself whether you can express it using other primitives in your language.

Your compiler must generate LLVM code

- Compilers should lower the level of abstraction; LLVM provides a machine-independent, low-level IR.
- Robust, widespread “collection of modular and reusable compiler and toolchain technologies.”

Great Moments in Evolution

Assembly Language

Before: numbers

```
55
89E5
8B4508
8B550C
39D0
740D
39D0
7E08
29D0
39D0
75F6
C9
C3
29C2
EBF6
```

After: Symbols

```
gcd: pushl %ebp
      movl %esp, %ebp
      movl 8(%ebp), %eax
      movl 12(%ebp), %edx
      cmpl %edx, %eax
      je   .L9
.L7: cmpl %edx, %eax
      jle  .L5
      subl %edx, %eax
.L2: cmpl %edx, %eax
      jne  .L7
.L9: leave
      ret
.L5: subl %eax, %edx
      jmp  .L2
```

Before

```
gcd: pushl %ebp
     movl %esp, %ebp
     movl 8(%ebp), %eax
     movl 12(%ebp), %edx
     cmpl %edx, %eax
     je   .L9
.L7: cmpl %edx, %eax
     jle .L5
     subl %edx, %eax
.L2: cmpl %edx, %eax
     jne .L7
.L9: leave
     ret
.L5: subl %eax, %edx
     jmp .L2
```

After: Expressions, control-flow

```
10   if (a .EQ. b) goto 20
     if (a .LT. b) then
         a = a - b
     else
         b = b - a
     endif
     goto 10
20   end
```

Backus, IBM, 1956

Imperative language for
science and engineering

First compiled language

Fixed format punch cards

Arithmetic expressions, If, Do,
and Goto statements

Scalar and array types

Limited string support

Still common in
high-performance computing

Inspired most modern
languages, especially BASIC

After: Expressions, control-flow

```
10    if (a .EQ. b) goto 20
      if (a .LT. b) then
          a = a - b
      else
          b = b - a
      endif
      goto 10
20    end
```

Added type declarations, record types, file manipulation

```
data division.  
file section.  
* describe the input file  
fd employee-file-in  
    label records standard  
    block contains 5 records  
    record contains 31 characters  
    data record is employee-record-in.  
01 employee-record-in.  
    02 employee-name-in    pic x(20).  
    02 employee-rate-in    pic 9(3)v99.  
    02 employee-hours-in   pic 9(3)v99.  
    02 line-feed-in        pic x(1).
```

English-like syntax: 300 reserved words
Grace Hopper et al.

Functional, high-level languages

```
(defun append (l1 l2)
  (if (null l1)
      l2
      (cons (first l1) (append (rest l1) l2)))))
```

LISP, Scheme, Common LISP

Functional, high-level language

```
(defun append (l1 l2)
  (if (null l1)
      l2
      (cons (first l1)
              (append (rest l1) l2))))
```

McCarthy, MIT, 1958

Functional: recursive, list-focused functions

Semantics from Church's Lambda Calculus

Simple, heavily parenthesized S-expression syntax

Dynamically typed

Automatic garbage collection

Originally for AI applications

Dialects: Scheme and Common Lisp

Powerful operators, interactive, custom character set

```

Iverson, IBM, 1960

Imperative, matrix-centric

E.g., perform an operation on each element of a vector

Uses own specialized character set

Concise, effectively cryptic

Primarily symbols instead of words

Dynamically typed

Odd left-to-right evaluation policy

Useful for statistics, other matrix-oriented applications

Algol, Pascal, Clu, Modula, Ada

Imperative, block-structured language, formal syntax definition, structured programming

```
PROC insert = (INT e, REF TREE t)VOID:
    # NB inserts in t as a side effect #
    IF TREE(t) IS NIL THEN
        t := HEAP NODE := (e, TREE(NIL), TREE(NIL))
    ELIF e < e OF t THEN insert(e, l OF t)
    ELIF e > e OF t THEN insert(e, r OF t)
    FI;

PROC trav = (INT switch, TREE t, SCANNER continue,
             alternative)VOID:
    # traverse the root node and right sub-tree of t only.
    IF t IS NIL THEN continue(switch, alternative)
    ELIF e OF t <= switch THEN
        print(e OF t);
        traverse( switch, r OF t, continue, alternative)
    ELSE # e OF t > switch #
        PROC defer = (INT sw, SCANNER alt)VOID:
            trav(sw, t, continue, alt);
```

String-processing languages

```

LETTER = 'ABCDEFGHIJKLMNOPQRSTUVWXYZ$#@'
SP.CH  = "+-,.*)'/'& "
SCOTA  = SP.CH
SCOTA  '&' =

+ ( CAOP . OPERATION B F3C . OPERAND |
+ F2 . OPERATION B F3 . OPERAND)
+ B REM . COMMENT

```

Programming for the masses

```
10 PRINT "GUESS A NUMBER BETWEEN ONE AND TEN"  
20 INPUT A$  
30 IF A$ <> "5" THEN GOTO 60  
40 PRINT "GOOD JOB, YOU GUESSED IT"  
50 GOTO 100  
60 PRINT "YOU ARE WRONG. TRY AGAIN"  
70 GOTO 10  
100 END
```

Invented at Dartmouth by
John George Kemeny and Thomas
Eugene Kurtz. Started the whole
Bill Gates/ Microsoft thing.

The object-oriented philosophy

```
class Shape(x, y); integer x; integer y;  
virtual: procedure draw;  
begin  
  comment – get the x & y coordinates –;  
  integer procedure getX;  
    getX := x;  
  integer procedure getY;  
    getY := y;  
  
  comment – set the x & y coordinates –;  
  integer procedure setX(newx); integer newx;  
    x := newx;  
  integer procedure setY(newy); integer newy;  
    y := newy;  
end Shape;
```

99 Bottles of Beer in Java

```
class Bottles {  
    public static void main(String args[]) {  
        String s = "s";  
        for (int beers=99; beers>-1;) {  
            System.out.print(beers+" bottle"+s+" of beer on the wa  
            System.out.println(beers + " bottle" + s + " of beer ,  
            if (beers==0) {  
                System.out.print("Go to the store , buy some more, ")  
                System.out.println("99 bottles of beer on the wall.\n  
                System.exit(0);  
            } else  
                System.out.print("Take one down, pass it around, ");  
            s = (--beers == 1)?"":"s";  
            System.out.println(beers+" bottle"+s+" of beer on the  
        }  
    }  
}
```

Sean Russell, <http://www.99-bottles-of-beer.net/language-java-4.html>

99 Bottles of Beer in Java

```
class Bottles {  
    public static void main(  
        String s = "s";  
        for (int beers=99; beers>0; beers--) {  
            System.out.print("99 Bottles of Beer ");  
            System.out.println("on the wall.");  
            if (beers==0) {  
                System.out.print("No more bottles of beer ");  
                System.out.print("on the wall.");  
                System.exit(0);  
            } else {  
                System.out.print("Take one down ");  
                s = (--beers == 1) ? "a bottle" : "bottles";  
                System.out.println(s);  
            }  
        }  
    }  
}
```

Gosling et al., Sun, 1991

Imperative, object-oriented,
threaded

Based on C++, C, Algol, etc.

Statically typed

Automatic garbage collection

Architecturally neutral

Defined on a virtual machine (Java
Bytecode)

Sean Russell, <http://www.99-bottles-of-beer.net/language-java-4.html>

Efficiency for systems programming

```
int gcd(int a, int b)
{
    while (a != b) {
        if (a > b) a -= b;
        else b -= a;
    }
    return a;
}
```

Efficiency for systems programming

```
int gcd(int a, int b)
{
    while (a != b) {
        if (a > b) a -= b;
        else b -= a;
    }
    return a;
}
```

Dennis Ritchie, Bell Labs, 1969

Procedural, imperative

Based on Algol, BCPL

Statically typed; liberal conversion policies

Harmonizes with processor architecture

For systems programming: unsafe by design

Remains language of choice for operating systems

Functional languages with types and syntax

```
structure RevStack = struct
  type 'a stack = 'a list
  exception Empty
  val empty = []
  fun isEmpty (s:'a stack):bool =
    (case s
     of [] => true
      | _ => false)
  fun top (s:'a stack): =
    (case s
     of [] => raise Empty
      | x::xs => x)
  fun pop (s:'a stack):'a stack =
    (case s
     of [] => raise Empty
      | x::xs => xs)
  fun push (s:'a stack, x: 'a):'a stack = x::s
  fun rev (s:'a stack):'a stack = rev (s)
end
```

99 Bottles of Beer in Haskell

```
bottles :: Int -> String
bottles n
  | n == 0 = "no more bottles"
  | n == 1 = "1 bottle"
  | n > 1 = show n ++ " bottles"

verse :: Int -> String
verse n
  | n == 0 = "No more bottles of beer on the wall, "
            ++ "no more bottles of beer.\n"
            ++ "Go to the store and buy some more, "
            ++ "99 bottles of beer on the wall."
  | n > 0 = bottles n ++ " of beer on the wall, "
            ++ bottles n
            ++ " of beer.\n"
            ++ "Take one down and pass it around, "
            ++ bottles (n-1) ++ " of beer on the wall.\n"

main = mapM (putStrLn . verse) [99,98..0]
```

99 Bottles of Beer in Haskell

```
bottles :: Int -> String
bottles n
  | n == 0 = "no more bottles"
  | n == 1 = "1 bottle"
  | n > 1 = show n ++ " bottles"
```

```
verse :: Int -> String
verse n
  | n == 0 = "No more bottles of beer on the wall\n"
           ++ "no more bottles of beer on the wall\n"
           ++ "Go to the store and buy 99 bottles of beer\n"
           ++ "99 bottles of beer on the wall\n"
  | n > 0  = bottles n + "\n"
           ++ bottles n + "\n"
           ++ " of beer on the wall\n"
           ++ "Take one down and pass it around\n"
           ++ bottles n + " bottles of beer on the wall\n"
```

```
main = mapM (putStr
```

Peyton Jones et al., 1990

Functional

Pure: no side-effects

Lazy: computation only on demand;
infinite data structures

Statically typed; types inferred

Algebraic data types, pattern matching, lists, strings

Great for compilers, domain-specific languages, type system research

Related to ML, OCaml

Scripting languages: glue for binding the universe together

```
class () {  
  classname='echo "$1" | sed -n '1 s/ *:.*/p' '  
  parent='echo "$1" | sed -n '1 s/^.*: */p' '  
  hppbody='echo "$1" | sed -n '2,$p' '  
  
  forwarddefs="$forwarddefs  
  class $classname;"  
  
  if (echo $hppbody | grep -q "$classname()"); then  
    defaultconstructor=  
  else  
    defaultconstructor="$classname() {}"  
  fi  
}
```

99 Bottles of Beer in AWK

```
BEGIN {
    for(i = 99; i >= 0; i--) {
        print ubottle(i), "on the wall,", lbottle(i) "."
        print action(i), lbottle(inext(i)), "on the wall."
        print
    }
}
function ubottle(n) {
    return sprintf("%s bottle%s of beer", n?n:"No more", n-1?)
}

99 nbottles

Moore, NRAO, 1973

Stack-based imperative language

Trivial, RPN-inspired grammar

Easily becomes cryptic

Untyped

Low-level, very lightweight

Highly extensible: easy to make
programs compile themselves

Used in some firmware boot systems
(Apple, IBM, Sun)

Inspired the PostScript language for⁴⁵

The Whitespace Language

Edwin Brady and Chris Morris, April 1st, 2003

Imperative, stack-based language

Space, Tab, and Line Feed characters only

Number literals in binary: Space=0, Tab=1, LF=end

Less-than-programmer-friendly syntax; reduces toner consumption

Andrew Kemp, <http://compsoc.dur.ac.uk/whitespace/>

VisiCalc, Lotus 1-2-3, Excel

The spreadsheet style of programming

(NULL, 'dress', 'white', LAST_INSERT_ID()),  
(NULL, 't-shirt', 'blue', LAST_INSERT_ID());
```

Database queries

```
CREATE TABLE shirt (  
    id SMALLINT UNSIGNED  
    style ENUM( 't-shirt', 'dress', 'polo' )  
    color ENUM( 'red', 'blue', 'white' )  
    owner SMALLINT UNSIGNED  
    REFERENCES person  
    PRIMARY KEY (id)  
);
```

```
INSERT INTO shirt VALUES  
(NULL, 'polo', 'blue', 1)  
(NULL, 'dress', 'white', 2)  
(NULL, 't-shirt', 'blue', 3)
```

Chamberlin and Boyce, IBM, 1974

Declarative language for databases

Semantics based on the relational model

Queries on tables: select with predicates, joining, aggregating

Database query optimization: declaration to procedure

Logic Language

```
witch(X)    <= burns(X), female(X).  
burns(X)    <= wooden(X).  
wooden(X)   <= floats(X).  
floats(X)   <= sameweight(duck, X).  
  
female(girl).           {by observation}  
sameweight(duck, girl). {by experiment}  
  
? witch(girl).
```

Logic Language

```
witch(X)  <= burns(X), female(X).  
burns(X)  <= wooden(X).  
wooden(X) <= floats(X).  
floats(X) <= sameweight
```

```
female(girl).  
sameweight(duck, girl).
```

```
? witch(girl).
```

Alain Colmerauer et al., 1972

Logic programming language

Programs are relations: facts and rules

Program execution consists of trying to satisfy queries

Designed for natural language processing, expert systems, and theorem proving
